Why Monitor Particulate Matter?

"PM" (Particulate Matter) is not a single pollutant but refers to a complex mixture of solids and aerosols of varying shape, size, and chemical composition. It may contain many chemical species like organic compounds, inorganic ios, metallic compounds, elementary carbon, etc. When inhaled, it irritates the eyes, nose, throat, and airways, and the toxic substances in the PM may lead to other adverse health impacts such as nasal cancer, pulmonary fibrosis, etc. Emission of particulate matter into the atmosphere takes place from combustion processes, crushing or grinding activities, resuspension of dust, etc. Stakeholders like safety managers or workshop supervisors can further take necessary precautions with such actionable information.

Product Applications

Cement Industry
Packaging and ash handling system.

Mining Industry
Drilling, blasting and transportation.

Thermal Power Plants
Ash extraction plants

AQBot™ PM

## The best in class Particulate Monitor

AQBot™ consists of the NEMA 4X approved enclosure to last long in a harsh industrial environment. It offers all industry-standard output signals like MODBUS, CANbus, RS-485, RS-232, etc. In addition, the fixed air quality monitor can also offer other communication modes like GSM, GPRS, 3G, WiFi, LoRa, Ethernet, etc. The monitor can easily integrate with existing building monitoring or plant control systems infrastructure. Using such a wide range of communication capabilities, AQBot™ enables the Industrial Internet Of Things (IIoT) which is the backbone of Industrial Revolution 4.0.
