Why Monitor Methyl Mercaptan?

CH$_3$SH is a colourless, highly flammable, toxic gas with a distinct, strong unpleasant odour released as a result of microbial degradation of organic matter. It is an organosulfur volatile organic compound (VOC) hence, easily ignitable and decomposable, emitting highly toxic fumes and flammable vapors. Exposure to CH$_3$SH causes irritation to eyes and skin, as well as respiratory tract, damages liver and kidneys, leading to coma and death. Industrial sources of CH$_3$SH include manufacturing and use of methionine, pesticides, jet fuels, oil shale, plastics, etc. Subsequently, other sources include sewage treatment plants, petroleum refining, starch manufacturing, wood-pulp mill, rendering plants, pharmaceutical industry, etc. Real-time monitoring of CH$_3$SH levels helps in determining their source as well as formulating an action plan to control methyl mercaptan emissions.

Product Applications

Paper And Pulp Industry
