Why Monitor Methane?

Methane (CH_4) is a colorless, odorless, tasteless, non-toxic gas with the chemical composition of one carbon and four hydrogen atoms. Methane is the second most important greenhouse gas. It is 28 times more potent than carbon dioxide at trapping the sun's heat into the atmosphere. Its presence in the atmosphere increases the abundance of other greenhouse gases such as CO_2, O_3, water vapor, etc. CH_4 is an asphyxiant at higher concentrations leading to various issues such as suffocation, loss of consciousness, nausea, rapid breathing, numbness, etc., and may lead to coma and death. CH_4 monitoring is an efficient way to detect the buildup of CH_4 levels and take necessary actions. Real-time monitoring of CH_4 levels helps determine their source and formulate an action plan to control CH_4 emissions.
