Why Monitor Chlorine?

Cl$_2$ is a highly reactive, greenish-yellow gas. It has a suffocating, irritating, pungent bleach-like odour and can accumulate in enclosed, poorly ventilated, and low-lying areas. Cl$_2$ is emitted in industrial applications such as food processing, pulp, and paper mill and water cooling systems, etc. where it is used as an disinfectant. Continuous monitoring of Chlorine in such confined spaces, leakage prone zones and industrial sheds provides adequate warning of hazardous exposure. Stakeholders like safety managers or workshop supervisors can further take necessary precautions with such actionable information.
