# About AQBot<sup>™</sup>

AQBot<sup>™</sup> is an Industrial-Grade Single-Parameter air quality monitor with automation capabilities. It is compatible to monitor various critical environmental parameters like Toxic Gases, Particulate Matter, and Noise. This real-time air quality monitor allows industries to monitor what's crucial for them. It also has a display, siren, and strobe light system to get immediate alerts in critical situations. This system activates in real-time upon exceeding user-defined thresholds, providing a multi-sensory alert alongside software notifications.

The AQBot<sup>™</sup> enclosure houses robust electronics that last long in extreme industrial conditions. It offers industry-standard connectivity options in addition to multiple modes of wired and wireless communications. Using a wide range of communication capabilities, AQBot<sup>™</sup> bridges the gap between industrial communication and IIoT to improve processes and connect to existing systems that monitor processes or control plants.
